

APMA 3140-001 App Partial Differentl Equatns - Fall 2013

ENGR (17640)

INSTRUCTORS: Hopkins, Patrick (peh4v) - Johnson, Ryan (rfj2c)

Respondents: 60 / Enrollment: 62

It is important to note that this class was taught in partnership with Professor Patrick Hopkins
Ryan Johnson taught over 80 pct of Classes

Summary: APMA 3140-001 App Partial Differentl Equatns - Fall 2013 (17640)			
Overall Course Rating APMA-3140-001 Mean 4.23 APMA-3140-001 Std Dev 1.04 APMA-3140-001 Response Count 298		Overall Instructor Rating INSTRUCTOR: Hopkins, Patrick Mean 4.71 Std Dev 0.54 Response Count 419

Loved the class. Some of the hw grading was strict.

MatLab, thought it often sucked, is pretty useful and I'm glad I learned it.

I have thoroughly enjoyed this course and getting to know Professors Johnson and Hopkins. I will gladly take another course taught by them and will be looking forward to that course.

This was a great course, would take it again.

The matlab was particularly helpful in class for visualizing what we achieved in certain problems. The animated plots for waves and the heat equation simplified comprehension of the topics. Although the homework on matlab was tedious, I do have a basic understanding now of matlab, so the assignments were worthwhile. They also supplemented my learning of the course material.

Great class. Well taught

Best math class I've taken here at UVA - by far

Love this class.

They were both really great professors. The only difference was that Hopkins moved a little faster during lecture which was sometimes difficult to follow, but they were both affective and knowledgeable which was great.

It was hard, but interesting material. I enjoyed it.

Ryan Johnson and Professor Hopkins worked extremely well together. They truly made this course amazing. They took a subject [initially] I thought I would hate, and made it something I love. I can't thank them enough for being the amazing instructors that they are.

Both Ryan Johnson and Patrick Hopkins are by far the best teachers I have had at UVA. They definitely helped me learn and thrive in a class where I did not think I could.

Great course. The layout of the course was very useful in that we created our "toolbox" that could be used throughout the class. The professors did a great of explaining certain aspects of ODE's in the beginning of the class that were unclear to me before we began using them consistently. Both professors were very good at answering questions and having two people there to answer always resulted in detailed explanations from two different perspectives.

Some lectures were rushed. Specific reading assignments could possibly cut down lecture time or volume of in class questions, providing more time for one or the other.

~ QUESTIONS AND DETAILS ~

~ ANSWER MATRICES ~

Please try to find a room with a better board (fight if you have to). Also, slowing down when writing would be helpful. Especially Professor Hopkins, sometimes he can get going in class and it becomes hard to read and when we ask a question in class it's answered quickly.....perhaps slowing down slightly might help, but other than that, excellent course.

The use of matlab as a visual was very helpful. The use of matlab as additional homework assignments did not help my understanding at all and only added to any frustration I was already having with my homework.

This is my favorite class ever, don't change a thing, including the MATLAB. The only thing is it would be nice if the two teachers could agree on one greek letter for each thing in the beginning and not switch back and forth between X and Phi because it was confusing. I liked Prof Johnson's variable choices.

Please release the exam dates earlier because interview trips are easier to plan when you actually know what you'll miss. Overall, this was a great class and I really enjoyed it.

Both professors were excellent, approachable, realistic with expectations, but also very effective at pushing us students beyond our initial capabilities. Two outstanding professors.

Very good class, I feel like I have a good mastery of the material as a result of excellent organization and explanation by the instructors

Both of the professors were excellent. I'm generally not a fan of higher level math but these two made the class very interesting and manageable.

great class!!

The only critique I had of this class was that it was too easy. Every homework and test question was either done in class or was very similar to one that was. I would have preferred at least a few homework questions that required some independent thinking on the part of the students. However, I think this is something that could easily be fixed, and overall the course excellent.

This is the class that will get you an A. (most people will) However, it requires lots of work. It feels like 5 credits class from the homework.

I would recommend transcribing all the posted notes using software such as Latex and uploading pdfs for neater presentation. Also, I felt the grades in the class were too high and the information was a little plug and chug. I definitely learned a lot beyond the planned material, but I feel that came from my own curiosity in the material.

fuzzy bunny all day every day

The matlab assignment instructions had typos sometimes, but the professor sent out revisions through email. In cases where there was more than one email, it was difficult and confusing to keep track of all the changes.

The textbook was not usable at all. The examples weren't clear, there weren't enough examples on some types of problems if they existed at all. The problems, both in the book and created by the professor, would blow up into massive algebra problems. I feel that my algebra abilities were tested more than anything else in this class, including material that I learned. Overall, I'm pretty disappointed with this class. I was expecting this class to be helpful for future applications in my work, and I don't find it to be that way at all

Great job

Really happy with this class. I understand the material and feel comfortable with it. The teachers were phenomenal.

Excellent class overall, a significant improvement over the direction that the class used to take in the past. Both professors were excellent and worked well together. The course flowed naturally from one topic to another and significant effort was made to ensure everyone understood all the material.

Both instructors related all the math we were doing to physical problems which I like, but doesn't happen in a lot of APMA courses, at least not to this extent.

This was THE BEST class I have taken at UVA thus far.

Great course.

It would be nice if the notes posted on Collab were typed instead of handwritten. It was hard to read few of handwritten work. Otherwise, Professors John and Hopkins were excellent professors!

This was one of my favorite classes this semester, always looked forward to it! Both Professors were great and helpful

This was by far the most enjoyable class I have taken at this university.
